

R6

Features

- Peak pulse power:
 - 5000 W (10/1000 μ s)
- Stand off voltage range from 10 V to 180 V
- Unidirectional and bidirectional diode
- Low clamping factor
- Fast response time
- UL497B, file number: QVGQ2.E136224

Description

Transil diodes provide high overvoltage protection by clamping action. Their instantaneous response to transient overvoltages makes them particularly suited to protect voltage sensitive devices such as MOS Technology and low voltage supplied ICs.

1 Characteristics

Table 1. Absolute maximum ratings ($T_{amb} = 25\text{ °C}$)

Symbol	Parameter	Value	Unit
P_{PP}	Peak pulse power dissipation ⁽¹⁾	5000	W
P	Power dissipation on infinite heatsink	6.5	W
I_{FSM}	Non repetitive surge peak forward current for unidirectional types	500	A
T_{stg}	Storage temperature range	-65 to +175	°C
T_{op}	Maximum operating junction temperature	175	°C
T_L	Maximum lead temperature for soldering during 10 s at 5 mm from case.	260	°C

1. For a surge greater than the maximum values, the diode will fail in short-circuit.

Table 2. Thermal resistance parameter

Symbol	Parameter	Value	Unit
$R_{th(j-l)}$	Junction to leads	15	°C/W
$R_{th(j-a)}$	Junction to ambient on printed circuit. $L_{lead} = 10\text{ mm}$	65	°C/W

1. Pulse test: $t_p < 50\text{ ms}$.
2. To calculate V_{BR} versus T_j : V_{BR} at $T_j = V_{BR}$ at $25\text{ }^{\circ}\text{C} \times (1 + \alpha T \times (T_j - 25))$
3. $V_R = 0\text{ V}$, $F = 1\text{ MHz}$. For bidirectional types, capacitance value is divided by 2.

Figure 3. Peak power dissipation vs. initial junction temperature (printed circuit board)

Figure 4. Peak pulse power versus exponential pulse duration

Figure 5. Clamping voltage vs. peak pulse current

Figure 6. Capacitance vs. reverse applied voltage for unidirectional types (typical values)

Note: The curves in [Figure 5. Clamping voltage vs. peak pulse current](#) are specified for a junction temperature of 25 °C before surge. The given results may be extrapolated for other junction temperatures by using the following formula: $\Delta V_{BR} = \alpha T \times [T_{amb} - 25] \times V_{BR}(25 \text{ }^\circ\text{C})$. For intermediate voltages, extrapolate the given results.

Figure 7. Capacitance vs. reverse applied voltage for bidirectional types (typical values)

Figure 8. Peak forward voltage drop vs. peak forward current for unidirectional types (typical value)

Note: For Figure 8. Peak forward voltage drop vs. peak forward current for unidirectional types (typical value), multiply by 2 for units with $V_{BR} > 220$ V.

Figure 10. Relative variation of leakage current vs. junction temperature

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.
